Re: Council Approval for Engineering Agreement

Upon the request of RMU staff Willet Hoffman & Associates has submitted an engineering proposal. The scope of our request was for professional services as part of the 12 inch water main extension along 20th street and along 8th avenue to N. 15th. This project will also replace approximately 1,000 feet of a 6 inch galvanized main that is known problem for the City. The total project will include installation of 3,120 feet of 12 inch main providing a critical path for water to travel from the north side of town to the central part of the city.

Funding for this project is available from the capital expense budget.

The attached proposal from Willet Hoffman and Associates amounts to \$67,000.

Based on the current circumstances, I recommend that the City accept the proposed engineering agreement so work can begin on this project.
