**Re: Caron Road Substation**

---

Sargent and Lundy has provided a memo that contains the additional work we like to perform at the Caron Road Substation. This work would include adding of 15kV medium voltage vacuum type breakers to the existing switchgear bus 5 and 6. I would like to have this added to the agenda for the September 14<sup>th</sup> council meeting and recommend this additional work.

This work would provide RMU more disconnecting and isolating methods to provide the most reliable power to our customers. This would also provide us the ability to provide a safer work environment for our employees.

The project at this point is well under budget and this additional cost should not go over what was in the budget for this project.
