Re: Utility Truck

RMU had \$25,000 in this current budget to replace one of the pick-ups. After reevaluating the equipment it was found that the pick-ups are still in good working conditions. However where we fall short is on the a medium size truck that can be used for underground projects. Currently we need to take a bucket truck or digger truck to these kinds of project and that ties a truck up all day and longer that could be used by other crews.

Prescotts has given RMU a quote for a Utility truck that matches the Ford State bid cost, it is my recommendation that RMU purchases this truck from Prescotts for the total cost of \$41,065.00.

Thanks!
