CC: Tim Isley, Supt. of Street Division

Chris Frye, Finance Director

Alan Cooper, City Attorney (via council packet)

From: Sam Tesreau, City Engineer

Date: April 7, 2014

Re: Construction Engineering Services Agreement for the School Avenue Bridge replacement over Kyte River (Str. No. 071-6006), necessary roadway approach modifications, and intersection reconstruction at Turkington Terrace and School Avenue

Encl: (1) Construction Engineering Services Agreement

1. The Construction Engineering services phase for the replacement of the School Avenue box culvert structure, other related roadway improvements, professional services for necessary right of way acquisition and other preliminary drainage utility work has programmed in the FY 2014/15 budget. Wendler Engineering Services provided the Preliminary Engineering design Services for the project and the project has now been let through the competitive bidding process.
2. An estimated amount of hours have been proposed for the project including construction surveying/staking, inspection, documentation, materials testing and as built. In late 2013 construction surveying became a prevailing wage category under the Illinois Department of Labor for all public works projects which has significantly increased the cost of performing that function. The actual hours for the construction engineering services will be reviewed throughout the construction project to determine any modifications to such.
3. Please consider approval of the Construction Engineering agreement (enclosure (1)) with Wendler Engineering Services, Inc.
